❖ **Library Management System**

- **Python + Tkinter Framework + MySQL**

Designed and Developed the Library Management System is a comprehensive software application designed to automate and streamline the operations of a library. Developed using Python, Tkinter Framework and MySQL Database, this system provides a user friendly interface for librarians to manage day-to-day operations of books, members, and transactions efficiently. By utilizing the resources it is Simply the Process, reduce the human error and enhance the experience for both staff and students.

❖ **College Management System**

- **Core Java + Graphical Java + MySQL**

Designed and developed a comprehensive College Management System Using Core Java, Graphical Java and JDBC with MySQL. Enabling efficient management of student records, faculty information, fees management, courses and grades. The system features User authentication, Data validation and reporting capabilities. In which successfully implemented a User – Friendly interface, efficient data management, and secure access, making it solution for the administrative systems in school/collages.

❖ **DrainGuard : Smart Underground Drainage Management Monitoring System.**

- **Basic Electronics + Arduino Uno Microcontroller + Various Sensors.**

Designed and Developed IoT Based Model For Smart Underground Drainage Management System Using the Various Electronics Sensors and Arduino Uno Microcontroller for Monitoring the hole system. Monitoring underground drainage is a challenge. This project proposes various methods for monitoring and managing underground drainage systems. Through this project, we can reduce the labour and time required to check the blockage of sewers and underground drainage pipes, and avoid hazards. Use your smartphone to access the Status of Drainage, we can send notifications via SMS notifications with the location where problem occurs.
